ECONOMIC INTELLIGENCE STATISTICAL HANDBOOK

CIA/RR RA-12
(ORR Project 00.1616)

NOTICE

This compilation was prepared primarily for use in ORR and is not a formal ORR publication. Some of the estimates contained herein have not been reviewed or coordinated in ORR.

CENTRAL INTELLIGENCE AGENCY
Office of Research and Reports

FOREWORD

1. Objectives and Scope.

The *Economic Intelligence Statistical Handbook* (hereafter referred to as the *Handbook*) is a concise reference work in tabular and graphic form designed to supply data pertinent to the analysis, assessment, and comparison of the economic characteristics of the Sino-Soviet Bloc countries and the countries comprising the North Atlantic Treaty Organization (NATO). Ideally, such a compilation should contain information pertaining to production, plans, capacity, trade, consumption, inventory, stockpiles, and known reserves. Where this research aid falls short of its objective, it is hoped that missing data may be supplied at a future date.

Countries of the Sino-Soviet Bloc included in this report are the USSR, Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, China, North Korea, and North Vietnam. The total production of these countries is compared to that of NATO, whose member countries are Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, the U.S., and West Germany. The Saar has been added as a separate political entity merely because its industrial production is often listed separately in the sources used.

The *Handbook* covers primarily the years 1938 and 1946-56. In several instances, however, the years 1946-47 and 1956 have been omitted because of a lack of sufficient information. Data for the individual NATO countries, except for the U.S., have been included only for the years 1953-54 or 1954-55. When available, data for the other major producers of the Free World have also been included for the same years.

2. Source and Reliability.

Unless otherwise indicated, data for the Sino-Soviet Bloc countries are ORR estimates (except for those in Tables 153 through 157 and in Table 197) contained in the ORR Estimates File as of 15 August 1956. To provide a central source for up-to-date reference data, ORR analysts contribute to this file all economic estimates as they are made and submit quarterly reports revising or confirming previous estimates. Such estimates, therefore, are provisional and subject to adjustment from time to time.

Data for the NATO countries were selected from the most reliable and most current sources available. In general, these sources were unclassified publications of the UN, the Organisation for European Economic Cooperation (OEEC), and official statistical bulletins of the various countries. Reasonable care was exercised in selecting the sources, but CIA does not assume responsibility for their accuracy. A list of these sources is included in this volume.

Blanks which appear in the data of any country listed indicate that information was either not available as to the amount or to the existence of production. For the Sino-Soviet Bloc countries, 1956 official Plan figures were included whenever possible, but most 1956 figures included are projections made by ORR analysts.

When a country name is omitted from the countries listed above, it again indicates that information was not available. In each case where it is known that no production exists of a specific item in Sino-Soviet Bloc countries, however, a footnote states this fact. For NATO countries, the omission of the name of the country may mean either that information was not available or that there was no production. The dis-

inction between "Not Available" and "No Production" could not be made in the case of the NATO countries, because the principal sources used did not indicate a distinction.

3. *Boundaries.*

Since the Sino-Soviet Bloc is relatively new and since significant boundary changes have occurred during the past 25 years, comparability of data becomes an important problem in analyzing some time series. Unless otherwise indicated, boundaries of the countries in this research aid are those presently in force, and the data for earlier years have been adjusted accordingly. The map* should serve as a guide for the present boundaries.

4. *Time Series.*

No attempt was made in compiling the present *Handbook* to adjust time series to take account of such problems as homogeneity of product and changes in reporting systems. Any adjustments for such factors known to have been made by analysts originally responsible for the estimates or al-

*Following p. 159.

ready made in the source of NATO data have been indicated in footnotes to individual tables.

5. *Rounding.*

With the exception of official figures the data in this report generally have been rounded to three significant figures, unless such rounding would have resulted in significant difference in the number. In cases where a figure was less than one-half of the smallest unit used in the table, the figure has been omitted and the term "Negligible" has been substituted. Data officially published by Sino-Soviet Bloc governments and accepted as estimates by the ORR analysts have not been rounded. These figures are in italics to identify them as official figures.

6. *Totals.*

Totals for NATO and Sino-Soviet Bloc countries are simple additions of unrounded data. Hence they may not always agree with the sum of rounded figures appearing under individual country headings. No adjustment has been made to compensate for gaps in country data. Totals were omitted, however, when they were obviously far from the true total of production.

GLOSSARY OF TERMS AND CONVENTIONS

| | |
|--------------------|--|
| Plan | Official plan data, sometimes derived from officially announced percentage increases over announced bases. |
| Consumption | Domestic consumption from stocks, production, and imports. |
| Inventory | Total stocks on hand; that is, operational stocks plus normal and strategic reserves. |
| Italics | Data officially published by Soviet Bloc governments and accepted as estimates by the ORR analysts concerned are in italics. |
| Blank spaces | Blank spaces indicate that data was not available, unknown, or not applicable. |

^a Precise comparisons of the levels of GNP between those of European countries and that of the US are not possible. The conversion into dollars has been made on the basis of official foreign exchange rates, and the purchasing power of the dollar is appreciably higher in most European countries than in the US. Intra-European comparisons of the converted dollar figures are subject to similar limitations. Adjustments to make the figures truly comparable cannot be made.

^b Exclusive of Canada and US.

| Total real expenditures..... | 487.3 | | 523.8 | | 541.0 | | 569.6 |
| Retail price reductions *..... | 43.2 | | 15.7 | | 0 | 0 | 0 |
| Raising agricultural prices *..... | 0 | | 23.3 | | 22.5 | | |
| Total stated expenditures..... | 530.5 | 514.7 | 562.8 | 553.9 | 563.5 | 537.8 | 569.6 |
| Budget Surplus..... | 13.8 | 25.1 | 9.7 | 4.7 | 26.7 | 23.7 | 23.1 |

* In 1953-1955, the Soviet budget included identical revenue and expenditure entries for Retail Price Reductions and Raising Agricultural Prices. Because these two entries represented essentially turnover taxes foregone and did not constitute either genuine revenue collections or genuine expenditures for resources, they have been deducted from total stated revenues and expenditures to obtain real revenues and expenditures.

Note: The State Budget, which includes local budgets, is a channel for the financing of most investment expenditures and assistance to the State enterprises, military and administrative expenditures, and expenditures on State services (education, health, and the like). With few exceptions, consumer expenditures are not reflected in the budget. A portion of budget receipts and expenditures (debts, reserves, and the like) represent transfer payments through the budget and therefore do not reflect the value of production or incomes earned in the economy.

^a The values shown in these tables are in current prices. They do not indicate changes in terms of constant purchasing power.

Revenue: Income from the socialized economy where not specified usually includes turnover tax receipts and payments from enterprise profits into the budget.

Expenditure: Expenditures on the national economy other than investment are believed to include such items as State contributions to increased working capital, usually for new industries, and subsidies to enterprises. These are shown in detail for some Hungarian budgets.

Note: See Albanian State Budget for general explanation of the budget.

^a All data are from official sources and are stated in "new" crowns stemming from the currency reform of 1953. Reports on the actual implementation of the budgets for 1954 and later have not yet been issued.

^b This figure is net of working capital and capital investments by the enterprises out of their own funds.

^c "Economic Investment" was reported to account for 20 billion crowns of the total expenditures in 1954, 20.8 billion crowns in 1955, and 27.7 billion crowns in 1956.

^d Excluded from this item but included under "other expenditures" are the long-term credits allotted to agriculture in 1954 of 1.6 billion crowns, in 1955 of 1,034 million crowns and in 1956 of 2,885 million crowns.

Note: See Albanian State Budget for general explanation of the budget.
^a Double-counting resulting from transfers between local and central governments eliminated.
^b Includes budget of East Berlin, 1953 to date.
^c Includes for the sake of comparison with previous years a new tax (produktionsabgabe) on production which is collected from the factory, but which has replaced some of the taxes on consumption.
^d Estimated.
^e Taxes on wages, salaries, and professional incomes only.
^f Not strictly comparable with previous years because of the increased use of enterprise funds for investment purposes.
^g Including investment and subsidies to MTS.
^h Includes among other things financing of uranium mining and defense expenditures. The amount of the latter was announced in Feb. 1956 as DME974.8 million. It was stated that this sum would not exceed 3 percent of the total expenditures for the year.

^a All data from official sources.

^b Because of the price reform of January 1, 1956, which raised prices of industrial goods considerably, total expenditures in the 1956 budget are about 9 percent higher in terms of 1956 prices than in 1955 prices. Investment expenditures are nearly 30 percent higher.

^c Includes 500 million zlotys not distributed in the breakdown.

^a Carried over from previous year.

^b The budget speech gives this figure as the surplus funds accumulated since 1949. The Chinese Communists in calculating surplus funds exclude certain of the expenditures shown here for 1951 and 1952 and add certain items to 1950 receipts. The 1955 budget speech states that roughly half of the surplus had been previously allocated and so only ¥3,155 million is carried over into the 1955 budget.

^a It will be noted that the series, as presented, reflect the various currency changes that occurred in the period 1948-55 and are not adjusted for comparability. The series were not carried back any further in time because of the changes in government and the concomitant effects on economic relationships. The figures cited are actual expenditures wherever possible; otherwise, they are planned allocations.

| World Total ^c | 1,200 | 1,340 | | | | | | |

^a Includes all NATO countries. The 1946 figure does not include West Germany, Greece, and the Saar. The data normally correspond to net production (that is, total production, less electricity consumed by the producing plants themselves) by both public utilities and auto-producers (private power stations producing power to supply a specific undertaking). The exceptions are Germany and the Netherlands in 1946-55, for which the data show gross production; and Canada, Denmark and the UK, for which the data cover only enterprises generating primarily for public use. Production by stations with installed capacity below a certain minimum, which varies by country, is also excluded.

^b All US public supply statistics are reported on a net basis. That is, the data represent power available at the bus bar, and thus excludes station use and losses, however, they do include transmission and distribution losses. When used to compare with Soviet Bloc data, about 5 percent should be added, because as far as is known, Bloc production data is on a gross basis.

^c Excludes the USSR and the China Mainland.

^a Includes anthracite and bituminous coal.

^b Excludes Denmark, Greece, Iceland, and Luxembourg.

^c Preliminary.

^d Albania has no production.

^e Includes lignite.

^f It is believed that most if not all the tonnages shown for Indochina for the years 1938-53 were produced from the same mines in North Vietnam which have been controlled and operated since 1954 by the Democratic Republic of Vietnam (Communist).

^g Eleven months only.

^h Estimate.

^a Figures refer to total production of manufactured gas by cokeries and gasworks. Blast furnace gas and oil refinery gases are excluded.
^b Includes all NATO countries. The 1938 figure includes all Germany, and beginning in 1951, includes producer gas. The Netherlands figures are gas deliveries, including imported gas but excluding gas supplied to nitrogen fixation works. The figures for Denmark, Iceland, Greece, Luxembourg, Norway, and Portugal represent gas from gasworks only.

^c Preliminary.
^d Computed from the information that sales of 12,816 million cubic meters represented 48 percent of production.
^e 1937.

^f Town gas only, from municipal plants; also includes other blended gases.

^g Computed from sales in the amount of 536 million cubic meters which represented 38 percent of production.

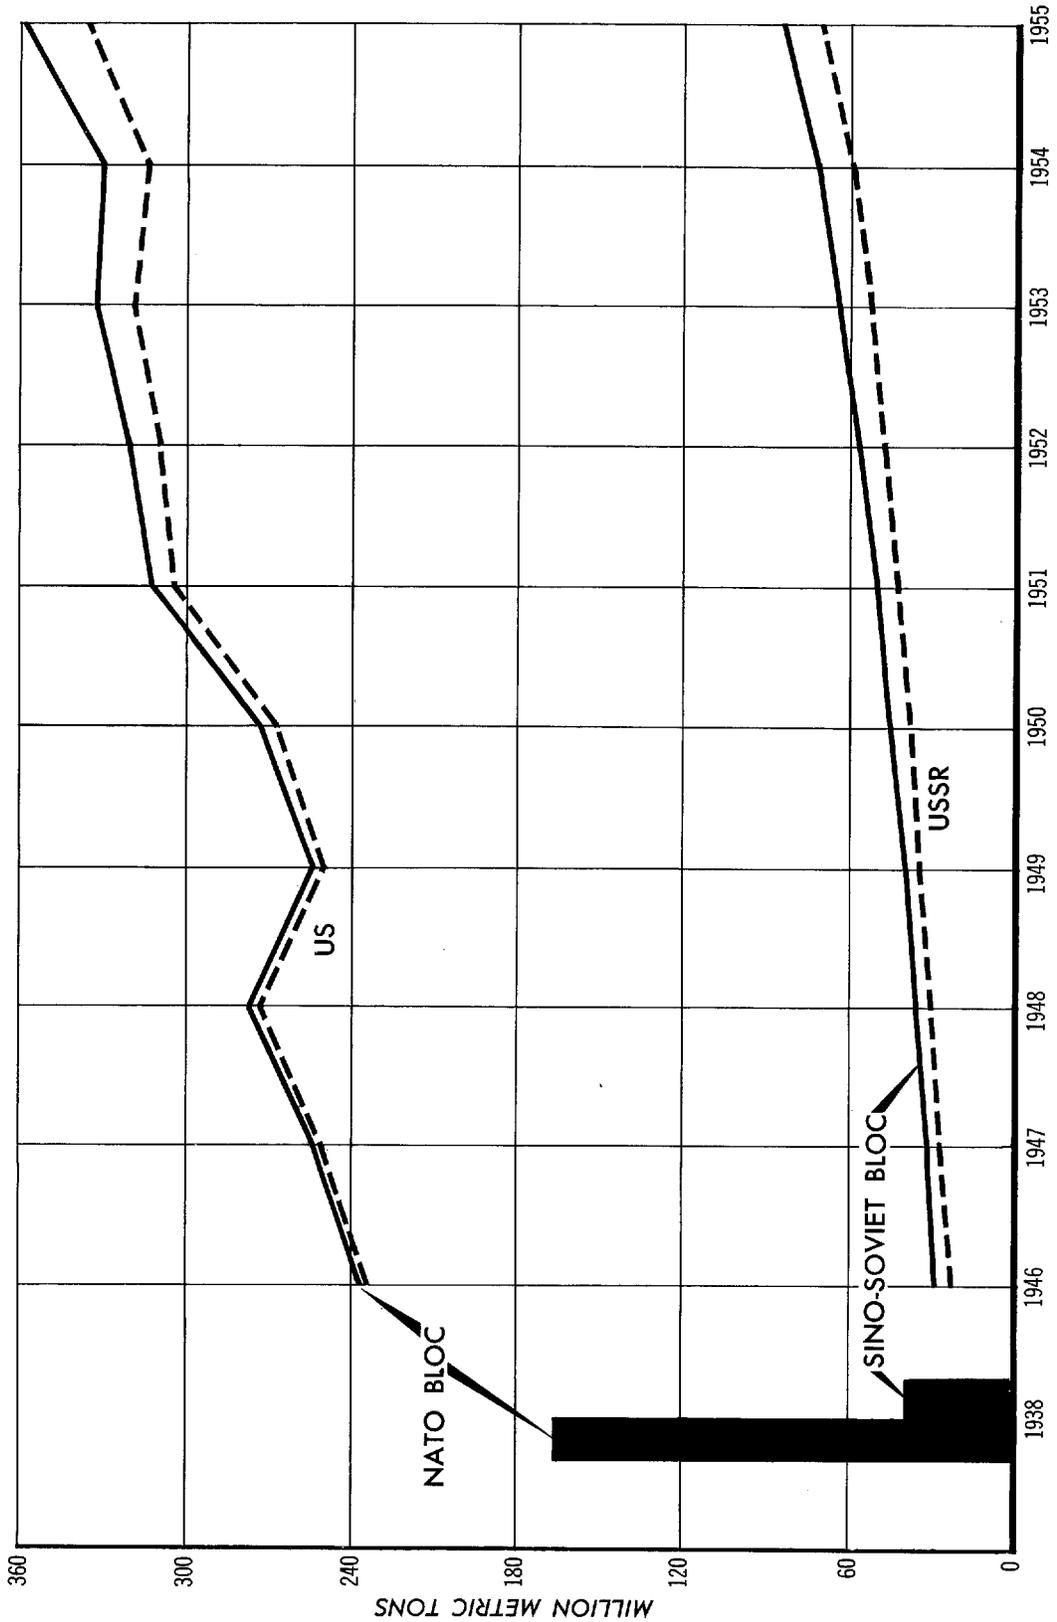

^h Computed from the estimate that sales in amount of 2,592 million cubic meters represented 42 percent of production in 1954 and 2,496 represented the same percentage in 1955.

ⁱ Deliveries, including imported gas, but excluding gas supplied to nitrogen fixation works.

| World Total ⁱ | 659,000 | 690,000 | | | | | | |

^a All figures exclusive of synthetic production.

^b Excludes Belgium, Denmark, Greece, Iceland, Luxembourg, Portugal, Norway, and the Saar. Specific gravity varies from 0.82-0.94. The figure for 1938 includes all Germany.

^c No production in North Korea and North Vietnam. No production in Bulgaria until 1954 and, since then, information is not available as to whether there was production or not.

^d Includes natural asphalt production.

^e Synthetic crude oil production for China is as follows: 1949-40; 1950-90; 1951-140; 1952-220; 1953-300; 1954-350; and 1955-450.

^f Seven months total. ^g Specific gravity varies from 0.84-0.92. ^h Excludes China mainland.

^a The data on this table are not intended to be the totals of the data in the following tables of individual petroleum products. This table includes minor miscellaneous products which are not included in any of the following tables.

^b Total production less refineries' own consumption. Synthetic products or substitute fuels excluded. The countries included are—Belgium, Canada (1938, 1952-54), France, Italy, the Netherlands, Portugal, the UK, the US, and West Germany.

^c Converted from barrels at 7.64 barrels per metric ton.

^d No production in North Vietnam. Synthetic production included in the figures of the following countries: the USSR, Czechoslovakia, East Germany, Poland, and China.

^e 1937.

^f 1936.

^{*} Yearly rate based upon January-June period except Canada for which the annual production is given.

^a Kerosene for NATO countries is chiefly illuminating oil and power kerosene, including white gas, tractor blends, jet fuels, and the like. The countries included are Belgium, Canada, France, Italy, the Netherlands, Portugal, the UK, the US, and West Germany. The NATO total for 1938 includes all Germany for 1937. The Netherlands and Italy exclude quantities used at refineries or lost.

^b Preliminary.

^c Excluding jet fuel.

^d No production in North Vietnam. Synthetic production of kerosene is included in the figures of the following countries: the USSR, Czechoslovakia, East Germany, Poland, and China.

^e 1937.

^f 1936.

^{*} Excluding the USSR, Eastern Europe, Austria, India, and China mainland.

| Philippines | | 1,420 | 1,430 | |
| Sierra Leone | | 888 | 1,020 | |
| World Total ^k | | 225,000 | | |

^a Metal content of ore in the NATO countries and China are, as follows: the US, 50 percent; Canada, 55 percent; the UK, 30 percent; France, 34 percent; Belgium and Luxembourg, 28 percent; Italy, 50 percent; Norway, 65 percent; West Germany, 27 percent; Turkey, 50 percent; Greece, 48 percent; China believed to be approximately 50 percent. Other major producers: Algeria, 52 percent; Austria, 32 percent; Brazil, 68 percent; Chile, 64 percent; India, 64 percent; Japan, 54 percent; Malaya, 50 percent; Mexico, 68 percent; French Morocco, 45 percent; Peru, 60 percent; Philippines, 50 percent; Sierra Leone, 60 percent; Spain, 44 percent; Sweden, 60 percent; Tunisia, 54 percent; Union of South Africa, 61 percent; Venezuela, 64 percent; Yugoslavia, 45 percent. Data refers to the gross amount of marketable iron ores in state in which they leave the mines, including manganese ores but excluding pyrites.

^b The countries included are the US, Canada, the UK, France, Belgium, Italy, Norway, Luxembourg, and West Germany, Turkey, Greece (1938, 1950-54), Portugal (1938, 1951-55).

^c Excluding manganese iron ores containing 5 percent or more of manganese. ^d No production in Albania. ^e Plan figure. ^f Includes ferro-titanium.

^g Shipments. The iron content of production in Canada during 1939 was used instead of 1938 production in the NATO total.

^h Production by state owned mines only. ⁱ Exports. ^j Nine month total. ^k Excluding USSR and China.

^a The data refer to the estimated chromic oxide (Cr₂O₃) content of ores mined. The following percentages were used to reduce the Bloc estimates of ores mined to their Cr₂O₃ content: the USSR, a portion at 35 percent and the rest at 48 percent, and Albania, Bulgaria, and Rumania at 45 percent.

^b The countries included are Greece, Portugal (during 1946-54 only), Turkey, and the US.

^c No production of chrome ore in Czechoslovakia, East Germany, Hungary, Poland, and China.

^a The figures relate to the tungsten trioxide (WO₃) content of tungsten ore mined. The following percentages were used to reduce the Bloc estimates of ores, or concentrates, mined to their WO₃ content: the USSR concentrates, 65 percent; East German ore, 65 percent; China ore, 68 percent; North Korea ore, 60 percent.

^b The countries included are Canada, France, Italy, Portugal, the UK, and the US.

^c No production of tungsten ore in Albania, Bulgaria, Czechoslovakia, Hungary, Poland, and Rumania.

^d Contains scheelite, wolfram, and tin-tungsten ore.

^e Exports.

^f Does not include USSR.

^a Includes the US and Canada.

^b Chiefly as by-product in electrolytic refining of copper.

^c Comprises 580 MT by-product of copper refining and 1,820 MT content of ore.

^d Bloc countries which have no production are Albania, Bulgaria, Czechoslovakia, Hungary, Rumania, China, and North Vietnam.

^e 1951-53 production from imported ores; 1954-55 produced from ore stock and scrap.

^f Production in all forms from Canadian ore.

^g Nickel content and small fraction of cobalt in oxide.

^a Total production of refined copper by refineries, both electrolytic and fire-refined, irrespective of whether refined from blister, anodes and other primary materials or from scrap and other secondary materials. Copper refined by manufacturers for their own use is included. Excluded is copper recovered from secondary material by simple remelting without being processed by a refinery. For the years 1938, and 1946-52, however, the figures may not be strictly comparable to other years as they were taken from a different source. The countries included are Belgium and Luxembourg, Canada, France, Italy, Norway, Turkey (1953-55), the UK, the US, and West Germany.

^b 1939.

^o Belgium and Luxembourg combined.

^d Countries in which the smelter production was considerably larger than the refined copper production are as follows:

^a The countries included are: Belgium, Canada, Denmark, France, Greece, Iceland, Italy, the Netherlands, Norway, Portugal, Turkey, the UK, the US, and West Germany. The 1938 total includes all prewar Germany. The figures cover, as far as possible, both sea and inland fisheries. Most of the data, and virtually all those for 1938 and 1947-53 are expressed in terms of live weight. All data for 1954 refer to landed weight which generally varies by country from about 85-95 percent of live weight.

^b Preliminary figure.

^c 1933-37 average.

^d Prewar.

^a Raw value, centrifugal sugar; refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal sugar, as distinguished from non-centrifugal, includes cane and beet sugar produced by the centrifugal process. Sugar for all countries is beet sugar unless otherwise indicated.

^b The countries included are: Belgium, Canada, Denmark, France, Italy, the Netherlands, Turkey, the UK, the US, and West Germany.

^o Preliminary figure.

^d 1935-39 average.

^e 1937 figure.

^f 1937-41 average.

^z Some countries listed also produce a large amount of non-centrifugal sugar. Non-centrifugal sugar includes all types of sugar produced by other than the centrifugal process. The estimates include such kinds known as piloncillo, panelo, papelon, chancaca, rapadura, jaggery, gur, muscovado, panocha, and the like, used largely for consumption in the relatively few areas where produced.

| Canned Goods ^l | Million 400 gram cans.. | 300 | 440 | 740 | 500 | 740 | 950 | 1,120 | 1,250 | 2,380 | 2,730 | 2,730 |

^a Foreign trade in fish was considered to be negligible. Canned fish was deducted on the basis of 15 percent of total canned goods. Twenty-eight percent of production was deducted for spoilage and waste.

^b Imports of meat are negligible. Twelve percent was deducted for spoilage and waste, and canned meat was removed from the total on the basis of 16 percent of total canned goods.

^c Modifications were made for (1) butter and cheese on the basis of 20 kilograms of milk per one kilogram of butter or cheese, (2) milk fed to livestock at 7 percent of production, and (3) canned milk on the basis of 7 percent of total canned foods.

^d Production estimates were adjusted to eliminate feed and waste; seed was computed at 1.75 tons per hectare planted. Industrial use (manufacture of alcohol) was computed at 1 ton of potatoes per 27.5 gallons of alcohol.

^e Total production was reduced by 12 percent to cover feed, seed, and waste. Deductions for canned vegetables were computed at 30 percent of total canned foods production.

^f Estimates for sugar are based on planned production. When plans were not fulfilled, availability was increased through imports and withdrawal from state reserves.

^g Vegetable oil used for food is estimated at 60 percent of total available supply, that is, production plus imports.

^h The use of slaughter fats for food is estimated at 85 percent of production.

ⁱ The estimate of production is considered to be equivalent to consumption for the period 1948-55.

^j Planned production is estimated as the available supply for consumption, with withdrawals from inventories making up the difference when plans were underfulfilled.

^k Planned production is estimated to equal consumption, with withdrawals from inventories making up the difference when plans were underfilled.

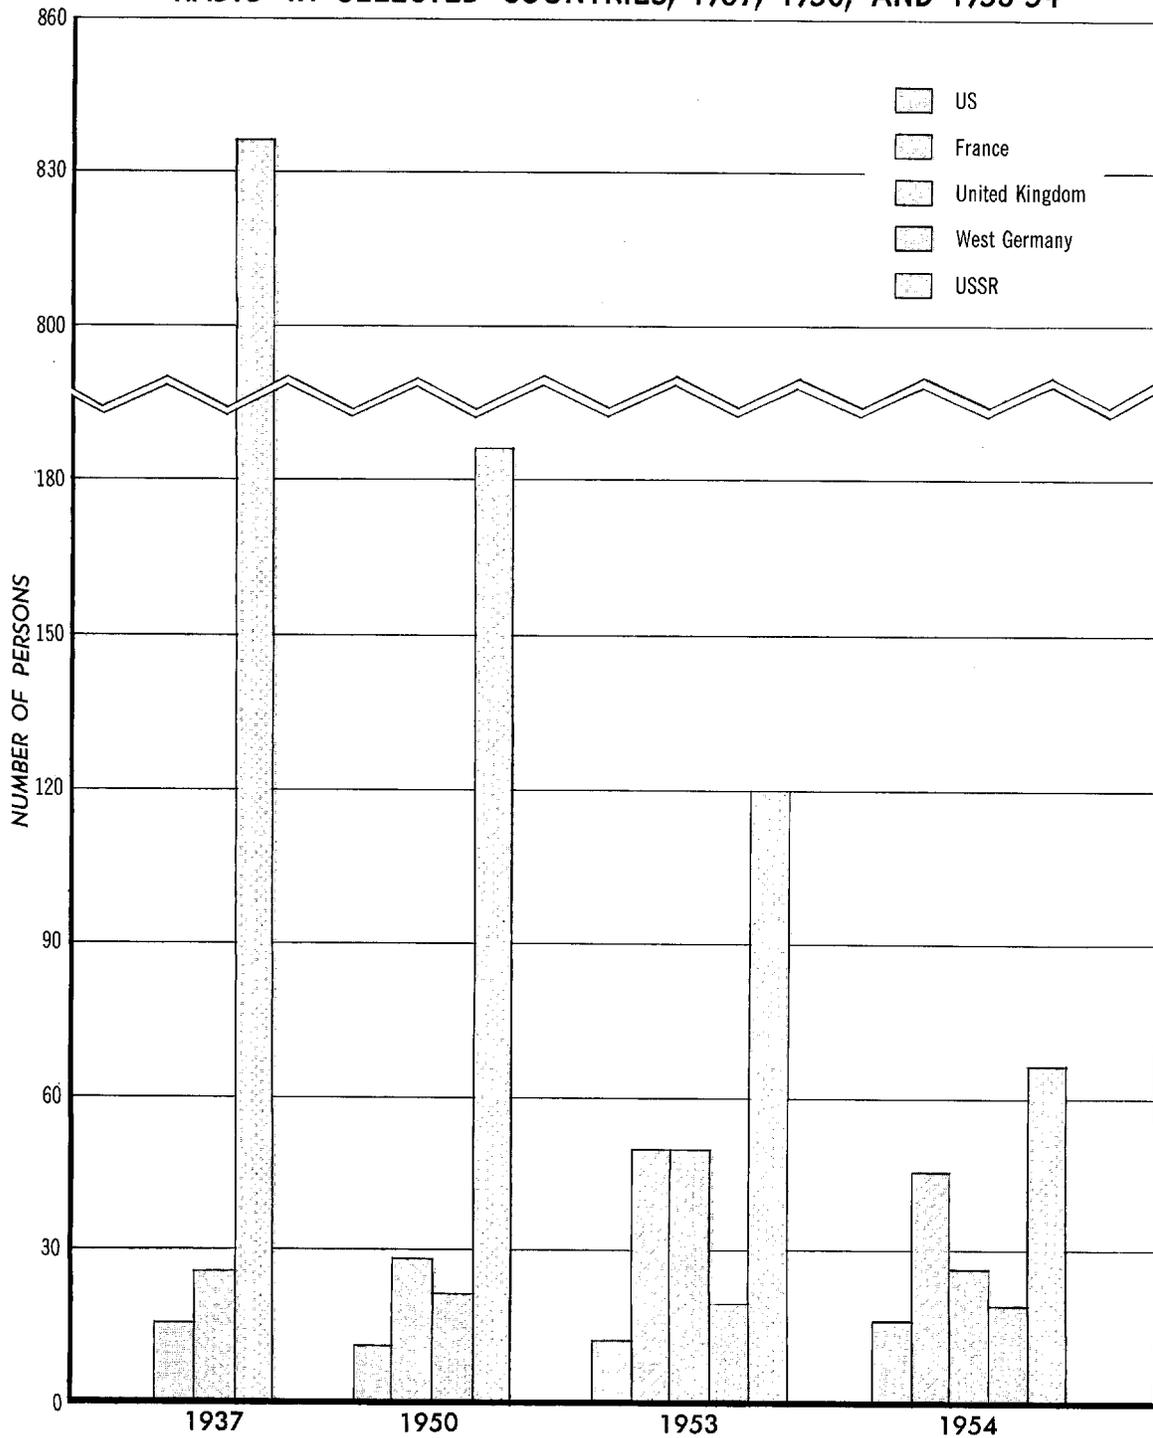

^l Production estimates were adjusted to take account of state reserve levels as follows: for the general trend, it was assumed that the "normal" accumulated reserve in any one year was equivalent to production in the following year. An average refreshing period of 4 years was taken into account. The general trend was modified by the following assumptions: (1) that there was an increase in net sequestration during the Korean War (1950-52) at the annual rate of 35 percent of production; (2) that withdrawals exceeded sequestration by 200 million cans annually during 1953 and 1954. It was assumed that net sequestration amounted to 50 percent of production in 1937 and 25 percent in 1940. Since foreign trade accounts for less than 10 percent of aggregate production no adjustments were made for it except for canned fish. It is estimated that 50 percent of the canned fish is exported.

| UK..... | 687 | 760 |

^a No production in Albania, Bulgaria, East Germany, Poland, Rumania, China, North Korea, and North Vietnam.

^b 1937.

^c The figures officially reported for 1954-55 are 120 and 134 respectively but the meaning of the unit of measure used, "shtuk," is not defined. It is here assumed that "shtuk" refers to complete locomotives, which for these years comprised two sections each. On this assumption the figures have been doubled to bring them into closer agreement with other information.

| 1955..... | 2,480 | 900 | 230 | 875 | 4,485 |

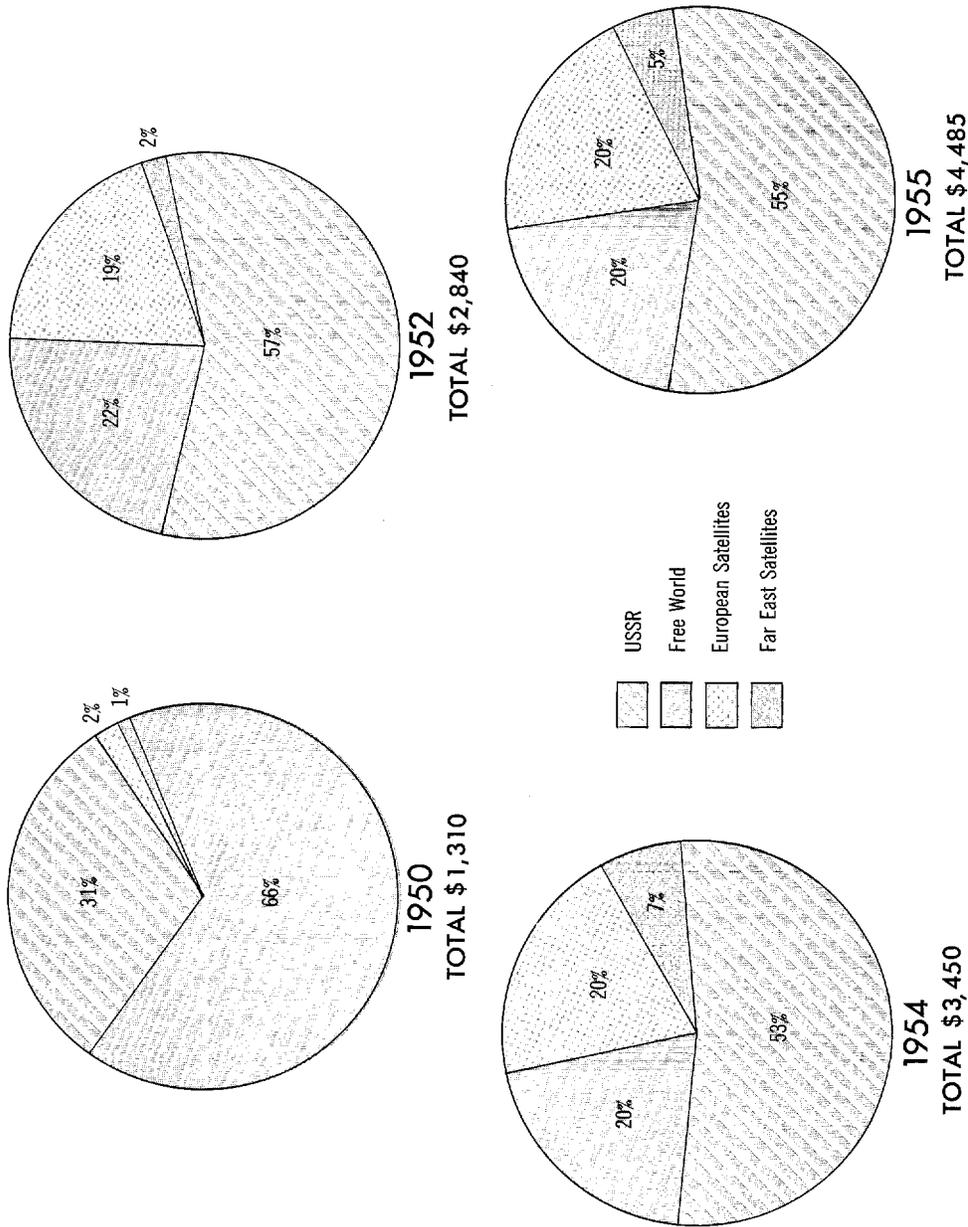

* These totals differ from the data on Table 188 because of the difference in method of reporting. This table is made up of official data reported by China in terms of CIF prices for imports and FOB prices for exports. It also includes CIA estimates of unrecorded trade with China plus other adjustments. Table 187 on the other hand quotes only free world reported trade with China, in terms of CIF prices for imports from China to the Free World and FOB prices for exports to China from Free World ports.

| China | 100 | 118 | 134 | 147 | 157 | 165 |

Page 3: Table 5. Add the word Selected at the beginning of the title.

and add the following to footnote a:

If the dollar estimates for Canada and total European NATO countries are to be consistent with the dollar valuations in Tables 1 and 3, they would be about 35 percent higher. This increase is occasioned by dollar conversions based on the averages obtained by valuing each country's product both in dollars and in native currency instead of employing the official exchange rates.

Page 142: Table 179. Change the title of the table to Number of Mass Aural Radio Broadcast Transmitting Stations.

Page 143: Table 181. Change the title of the table to Number of Aural Radio Broadcast Receivers in Use.
